### Speedometer Dials

Cut 10 white and 10 black speedo indicators out of 2mm plasticard and file edges smooth (this is actually easier than it sounds, as plasticard 'snaps' apart after scoring).

Use a 5mm drill bit to drill the central hole.

### Speedometer Construction

Laminate the speedometer graphic, drill a 5mm whole through the grey circle, attach a craft rivet through the hole with the two dials (the black dial underneath serves as the 'previous speed' indicator).

You may need to mount the speedo graphic on something of appropriate thickness to make the whole thing fit snugly.

PS Use the speedo when your pedestrian leaves the car (just remember that pedestrians have a maximum speed of 3).

Enjoy—if you've come this far, you really *are* a diehard Battlecars fan!
